

AMENDMENTS TO THE CLAIMS

Claims 1-32 (Canceled).

33. (Currently Amended) A liquid crystal display device comprising:
a first structure having a plurality of side surfaces;
a second structure;
a liquid crystal panel between the first structure and second structure and having a display surface substantially nonparallel to the plurality of side surfaces; and
fixing means provided between the plurality of side surfaces and the second structure, fixing the first structure to the second structure in a direction substantially nonperpendicular to the display surface,
wherein the first structure includes a front surface substantially parallel to the display surface and wherein the front surface has only a single opening positioned so that a portion of the display surface is not covered by the front surface.

34. (Previously Presented) The liquid crystal display device according to claim 33, wherein the fixing means includes at least one hole formed in the side surfaces.

35. (Previously Presented) The liquid crystal display device according to claim 33, wherein the fixing means includes at least one screw.

36. (Previously Presented) The liquid crystal display device according to claim 33, wherein the fixing means includes adhesive material.

Claims 37-48 (Canceled).

49. (Currently Amended) A method of fabricating a display device comprising:
providing a display panel, the display panel comprising a display surface;
providing a first structure adjacent the display panel, the first structure comprising side surfaces substantially nonadjacent and nonparallel to the display surface;
providing a second structure adjacent a portion of the first frame-structure; and

immovably fixing the display panel between the first and second structures by fixedly coupling the first and second structures at the side surfaces in a direction substantially nonperpendicular to the display surface,

wherein the first structure includes a front surface substantially parallel to the display surface and wherein the front surface has only a single opening positioned so that a portion of the display surface is not covered by the front surface.

50. (Previously Presented) The method of fabricating the display device according to claim 49, wherein the first and second structures are fixedly coupled using adhesive material.

51. (Previously Presented) The method of fabricating the display device according to claim 49, wherein the first and second structures are fixedly coupled using screws.

52. (Previously Presented) The method of fabricating the display device according to claim 49, wherein the first and second structures are fixedly coupled using holes.

53. (Previously Presented) The method of fabricating the display device according to claim 49, wherein the display panel comprises a liquid crystal display panel.

54. (Previously Presented) The method of fabricating the display device according to claim 49, wherein the side surfaces comprise holes and wherein the first and second frames are fixedly coupled via screws extending beyond the second frame into the holes.

Claims 55-67 (Canceled).
